

Professor & Dept Head Bloomsburg University of Pennsylvania, PA, USA

Field Trip: July 26-31, 2014
Audience: All Majors, All Levels

GROUP 2 COURSES		
Greg N. Washington Professor & Dean University of California Irvine, CA, USA	Smart Materials and Adaptive Systems Imagine a world where aircraft monitor their structural health, twist their wings into optimal aerodynamic shapes, and actively control their own vibration, or a world where automobiles brace themselves for impact or actively adjust the ride and comfort for the passengers. Imagine a world where antennas alter their shapes and actively tune themselves. On a limited basis, often experimental, that is today's world. The technology that will enable many of the previously mentioned advances lies in the field of "Smart Materials". Smart Materials incorporate materials that have the ability to alter their performance in response to their surroundings.	<ul> <li>PKU Course No: XXXXXXX (3 Credits)</li> <li>Lecture Dates: July 7 – 25, 2014</li> <li>Time: 8-11 AM (3 hours), M-F</li> <li>Classroom: Teaching Bldg. XX, Rm XX2</li> <li>Final Exam: 8-11 AM, July 26, 2014</li> <li>Audience: Yr 3 &amp; 4 UG; Yr 1 Gr Students</li> </ul>
Fric Climent Professor Institute of Fluid Mechanics Toulouse, France	<b>Computational Fluids Dynamics and its Application to Multiphase Flows</b> Multiphase flows are ubiquitous in the industry (particles, drops and bubbles in petroleum, nuclear engineering and energy transformations). The numerical simulation has proven to be an efficient tool for engineers and researchers to understand and model the complex interplay between the continuous phase and the dispersion of discrete elements. The purpose of the lectures is to introduce numerical simulations of dispersed two-phase flows and advanced topics in computational fluids mechanics, including particle suspensions, bubbly liquids and droplet sprays. Lectures on classical numerical approaches for solving Navier- Stokes equations will be introduced, together with their applications to multiphase flows (dispersion, two-way coupling, modelling of hydrodynamic interactions, etc). Students will be trained to program some classic examples of important phenomena. Students will work on projects using Matlab to simulate particle suspension flows, bubble dispersion and droplet sprays.	<ul> <li>PKU Course No: XXXXXXX (3 Credits)</li> <li>Lecture Dates: July 7 – 25, 2014</li> <li>Time: 1-4 PM (3 hours), M-F</li> <li>Classroom: Teaching Bldg. XX, Rm XX2</li> <li>Final Exam: 1-4 PM, July 26, 2014</li> <li>Audience: Yr 3 &amp; 4 UG; Yr 1 Gr Students</li> </ul>
	Biomaterials and Biocompatibility	RKLL Counto Not XXXXXX
Tracy Cui, Professor University of Pittsburgh Pittsburgh, USA	This course is designed to introduce students to a more advanced understanding of biomaterials. Throughout the course ties are made between the topic of study and clinically relevant biomaterial performance. The course will introduce various biomaterials such as polymers, metals, and ceramics with the focus on their synthesis, characterization, structure-property relationship and surface modification. The biocompatibility issues of biomaterials will be discussed from different aspects such as protein adsorption, foreign body reaction, immune and inflammatory response etc. Finally, examples of clinical applications will be given.	<ul> <li>Course No: XXXXXX</li> <li>(3 Credits)</li> <li>Lecture Dates: July 7 – 25, 2014</li> <li>Time: 8-11 AM (3 hours), M-F</li> <li>Classroom: Teaching Bldg. XX, Rm XX3</li> <li>Final Exam: 8-11 AM, July 26, 2014</li> <li>Audience: Yr 3 &amp; 4 UG; Yr 1 Gr Students</li> </ul>
Kamran Behdinan Professor University of Toronto Toronto, Canada	Applied Finite Element Technology The computational aided engineering methods are extensively used in real-life engineering applications and industry. Techniques such as finite element method are very versatile and frequently indispensable part of engineering analysis and design. These methods are now widely used in practically all branches of engineering including the analysis of structures, solids, and fluids. In this introductory course, you will develop an understanding for the basis of the commonly used computational methods in mechanical systems analysis and design. Modeling of mechanical engineering problems using finite element method will be discussed. You will also have an opportunity to use finite element for projects. At the end of the course you will be able to develop finite element models and obtain solutions for linear and some nonlinear practical engineering problems.	<ul> <li>PKU Course No: XXXXXXX (3 Credits)</li> <li>Lecture Dates: July 7 – 25, 2014</li> <li>Time: 1-4 PM (3 hours), M-F</li> <li>Classroom: Teaching Bldg. XX, Rm XX3</li> <li>Final Exam: 1-4 PM, July 26, 2014</li> <li>Audience: Yr 3 &amp; 4 UG; Yr 1 Gr Students</li> </ul>
GROUP 4 COURSES		
Hagit Shatkay Professor University of Delaware Newark, DE, USA	Machine Learning in Biomedicine This course is designed for students interested in biology, biomedicine, computing and their intersection, as well as in biomedical engineering. The course aims to demonstrate how fundamental computational and algorithmic methods form the basis and the core of modern methods in computational biomedicine. It presents hardcore topics in machine learning, probability, statistical modeling and algorithms, while focusing on their practical application as building blocks for computational biology and medicine. The computational topics covered include: dynamic programming; Bayesian methods; Bayesian networks; hidden Markov models and the theory behind them; categorization-classification and clustering; text mining and information retrieval. Examples of the biomedical applications covered include: biological sequence alignment; gene finding; protein subcellular location prediction; cardiovascular data analysis; anomaly detection; biomedical text mining.	<ul> <li>PKU Course No: XXXXXXX (3 Credits)</li> <li>Lecture Dates: July 7 – 25, 2014</li> <li>Time: 8-11 AM (3 hours), M-F</li> <li>Classroom: Teaching Bldg. XX, Rm XX4</li> <li>Final Exam: 8-11 AM, July 26, 2014</li> <li>Audience: Yr 3 &amp; 4 UG; Yr 1 Gr Students</li> </ul>
	Basic Concepts and Applications in Nanomedicine	PKU Course No: XXXXXXX
Jonathan Choi Professor Chinese University of HK Hong Kong, China	Most commercially available healthcare products such as detergent, toothpaste and sunscreen, all contain nanoparticles in their formulation. At a fundamental level, the canonical biomolecules, including nucleic acids, sugars and proteins, also assume a size in the nanometer range. Due to enormous improvement in technologies that support the fabrication and manipulation of nanosized objects in the past two decades, increasing research efforts have focused on engineering biomolecules at the nanometer length scale. This emergent class of bionanomaterials forms the basis of numerous "nanomedicine" applications that are now under active investigation, and may provide promising solutions to some of the world's most severe diseases and other healthcare problems. This course will provide an overview of the field of nanomedicine. We will first articulate how "nano" as a length scale is relevant to biomedical applications. We will then explain the tools for the assembly and characterization of bionanomaterials frequently used in nanomedicine research. Next, we will present the three pillars of nanomedicine research: diagnostics, imaging and therapeutics, and illustrate the materials design considerations for creating nanoparticle-based agents involved in each of the pillar. We will conclude by delineating the process for translating nanomedicine products from laboratory discoveries to clinically relevant therapies.	(3 Credits) • Lecture Dates: July 7 – 25, 2014 • Time: 1-4 PM (3 hours), M-F • Classroom: Teaching Bldg. XX, Rm XX4 • Final Exam: 1-4 PM, July 26, 2014 • Audience: All Years

Application form for the 2014 Globex Summer Program can be obtained at <u>http://en.coe.pku.edu.cn/Globex-Application/index.htm</u>

## (website will be activated in early March 2014)
